

QuickLink is the reliable wireless messaging software that allows users to instantly send text messages to any wireless device, mobile phone, PDA or pager.

It's effortless to use - **QuickLink** can even integrate with other applications and serve as their messaging component. **QuickLink** then alerts key personnel of network failures, so that systems can get back up and running ASAP.

SEMOTUS SOLUTIONS
the wireless architects

Who uses QuickLink?

QuickLink is the ideal messaging software for companies and departments that need a dependable, easy to use "off-the-shelf" solution - simply install, point and click...your message is sent. QuickLink is used by all sorts of organizations, including:

- Emergency Dispatch Centers
- Couriers
- Field Service - Vending, Computer Repair, Electric, HVAC
- Healthcare facilities, On-call Nurse and Physician groups
- Mortgage and Finance companies
- And countless others!

Features

- **Multiple Devices and Protocols Supported** ~ QuickLink supports alphanumeric and numeric pagers, one-way wireless devices, mobile phones, and PDAs such as

RIM and Palm. QuickLink utilizes wireless protocols such as TAP, SMTP, WCTP, SNPP, GSM and HTTP, providing connections to virtually any wireless carrier.

- **Quick Message Send** ~ QuickLink can send messages to a single receiver or to a group of receivers. Administrators can pick up receivers and groups from a Favorites list in a convenient alphabetical order.
- **Reports** ~ Messages can be viewed, sorted, and filtered by users or message status. Messages are always accounted for.
- **Powerful Graphical User Interface** ~ QuickLink provides a browser-based user interface for desktop senders, making message sending easy. It's truly just a matter of pointing and clicking, and your message is sent.
- **QuickLink Monitor** ~ A convenient process that periodically checks the status of the QuickLink server - should a message fail as a result

of, for example, a downed paging service, QuickLink will send an immediate alert to the administrator. The QuickLink Monitor also cleans log files and queues, making sure they don't take too much disk space.

- **Security** ~ QuickLink offers secure access permissions. QuickLink can be deployed on a corporate intranet, behind a firewall, or on the open World Wide Web.
- **Intuitive GUI Administration** ~ Every administrative function can be performed on the GUI. QuickLink eliminates the need for complex file manipulation and configuration file editing.
- **Reports** ~ QuickLink keeps track of every message sent and provides information on status, send time, receiver, and more.
- **Log Files** ~ Comprehensive log files are available for QuickLink, allowing administrators to troubleshoot message delivery and system operations.
